

Comprehensive BlueStone AI-SEO Operational, Access & Cost Documentation

Document Title: AI Content Generation Workflow, System Access, Cost Estimates & GEO Performance Report
Organization: BlueStone Jewellery & Lifestyle Ltd.
Domain: blog.bluestone.com | bluestone.com
Date: September 01, 2026
Status: Active Operational SOP & System Audit

Executive Summary

This document provides a unified technical and operational playbook for BlueStone's festive & evergreen SEO blog engine. It details the **AI content generation workflow**, **AI usage & token cost models**, **WordPress publishing pipelines**, **system credentials registry** (with structured security placeholders), and **GEO / AI Overview (SGE) performance metrics**.

[!NOTE] All sensitive credential placeholders are marked with [PLACEHOLDER: Need Input from System Admin/User] to allow easy compliance updates while preserving verified technical configurations.

Section 1: AI Content Generation Workflow & Process SOP

1.1 Process Architecture (9-Stage Pipeline)

The blog generation pipeline transforms SEO keyword research into fully formatted, media-rich, schema-validated WordPress articles.

Detailed Stage Breakdown:

- Keyword Queue & Strategy Alignment:** Selection of target keyword from SEO Strategy 2026.xlsx (Week 1–2 / Week 3–4 sheets). Target festive year set to next calendar occurrence (e.g., 2027 for Mother's Day/Gudi Padwa).
- Competitor Analysis Pass:** Automated scraping of top 3 ranking competitor blogs to extract heading hierarchy (H2/H3), content gaps, FAQ coverage, and word count targets (docs/competitor-blog-analysis-SKILL.md).
- Pillar Content Drafting:** Article generation using bluestone-blog-master-prompt-v5.md enforcing:
 - Tone:** Warm, authoritative, commercial-yet-intent-first (80% shareable wishes/quotes, 20% brand jewellery recommendations).
 - Formatting:** Paragraphs + short takeaways; **no em/en dashes**, no spaced hyphens (word – word).
 - Length:** 1,200 – 2,500 words depending on query intent.
- Jewellery Product Selection:** Mandatory selection of 5–6 product SKUs strictly from Seo Products – consolidated.csv matching gender tags and exact dimensions. **No prices displayed anywhere.**
- Type 2 Carousel Images:** Product cards formatted into Gutenberg HTML carousel blocks (output/_holi_carousel_snippet.html) with keyword-optimized WebP alt tags.
- Type 3 Photorealistic AI Images:** Generation of 3 bespoke images per article (**Hero Banner, Flatlay, Lifestyle**) using **Higgsfield MCP (nano_banana_pro)** or **Magnific AI** with fair-skinned Indian models and natural lighting.
- WordPress REST API Publishing:** Execution via Python scripts (publish_*.py) connecting to https://blog.bluestone.com/wp-json/wp/v2/posts under author **Vikas** (ID 270271338).
- Structured Data Injection:** Inclusion of BlogPosting and FAQPage JSON-LD schemas, with 40–80 word direct answer FAQs formatted for AI Overview (GEO/AEO) extraction.
- Instant Indexing Submission:** URL dispatched to Google Indexing API via submit_google_indexing_api.py and tracked in indexed_urls_history.json.

1.2 Image SEO & Assets Matrix

Image Type	Source / Model	Spec / Format	Placement & Quantity	Alt Tag & Filename Protocol
Type 1 Raw	ProductImages/raw/	Original studio images	Reference only for AI generation	Internal reference
Type 2 AI Product	ProductImages/seo images/	WebP (\$800\times800\text{px}\$)	Carousel block (5–6 items)	{Keyword} gift idea: {Product Name}
Type 3 Photorealistic	Higgsfield MCP / Magnific	WebP (\$1200\times675\text{px}\$) full	3 per article (Hero, Flatlay, Lifestyle)	{occasion}–{type}–{year}.webp with primary KW in hero alt

[!IMPORTANT] **Hard Quality Rules:** All Gutenberg images must use sizeSlug: full. Type 3 prompts must specify fair-skinned Indian hand/wrist/model features. Prices are strictly prohibited.

 Section 2: AI Usage & Cost Reports (Token Consumption & Monthly Spend)

2.1 Unit Economics & Token Breakdown per Article

Each published blog article consumes AI resources across two main categories: **LLM Text Generation** (briefing, competitor parsing, drafting, schema generation) and **AI Image Generation** (photorealistic Type 3 images).

A. LLM Token Consumption (per Article)

- Input Tokens (Prompt + Context + Competitor Text + Product Specs):** $\sim 15,000$ tokens
- Output Tokens (Full Article + Gutenberg HTML + Schemas):** $\sim 4,000$ tokens
- Estimated LLM Pricing Rates (e.g. OpenAI GPT-4o / Claude 3.5 Sonnet):**
 - Input Rate: $\$2.50$ / 1M tokens
 - Output Rate: $\$10.00$ / 1M tokens
- LLM Cost Calculation per Article:** $\text{LLM Cost} = (15,000 \times \$0.0000025) + (4,000 \times \$0.000010) = \$0.0375 + \$0.0400 = \mathbf{\$0.0775}$ per article

B. AI Image Generation API Cost (per Article)

- Type 3 Images Required:** 3 images per article (Hero, Flatlay, Lifestyle)
- Generation Engine:** Higgsfield MCP / Magnific AI / Flux
- Unit Cost per Image:** $\$0.05 - \0.10 per image
- Image Cost per Article:** $3 \times \$0.08 = \mathbf{\$0.2400}$ per article

C. Total Production Cost per Article

$\text{Total Direct AI Cost per Article} = \$0.0775 \text{ (LLM)} + \$0.2400 \text{ (Images)} = \mathbf{\$0.3175}$ ($\sim \$0.32$ USD)

2.2 Monthly Spend & Portfolio Cost Report

Based on historical data from dashboard_data.json (292 articles published in the last 30 days) and projected steady-state volumes:

Production Tier	Articles / Month	Estimated LLM Cost	Estimated Image API Cost	Total Monthly Spend (USD)	Total Monthly Spend (INR @ ₹83/\$)
Last 30 Days Actuals	292	$\$22.63$	$\$70.08$	$\$92.71$	₹7,695
Steady-State (300/mo)	300	$\$23.25$	$\$72.00$	$\$95.25$	₹7,906
Aggressive Scaling (500/mo)	500	$\$38.75$	$\$120.00$	$\$158.75$	₹13,176

Portfolio Lifetime Spend Summary:

- New Strategy Cohort (536 Articles, Post-July 16):** $\$170.18$ USD ($\sim ₹14,125$)
- Legacy Strategy Cohort (1,028 Articles, Pre-July 16):** $\$326.39$ USD ($\sim ₹27,090$)
- Total Portfolio Investment (1,564 Articles):** $\mathbf{\$496.57}$ USD ($\sim ₹41,215$)

 Section 3: WordPress User Access List & Publishing Process Documentation

3.1 WordPress REST API Technical Architecture

WordPress integration operates via headless REST API endpoints under OAuth/Basic Auth tokens.

- WordPress REST API Base:** `https://blog.bluestone.com/wp-json/wp/v2/`
- Post Creation Endpoint:** `POST /wp-json/wp/v2/posts`
- Media Upload Endpoint:** `POST /wp-json/wp/v2/media`
- Default Author ID:** 270271338 (Vikas - BlueStone Editorial)
- Active Theme Template:** `Creatio (wp_id 29900)`
- Default Categories:** Festive Wishes (Category ID: [PLACEHOLDER]), Quotes & Wishes (Category ID: [PLACEHOLDER])

3.2 WordPress User Access Control List

The table below outlines verified user roles and placeholders for team access management:

User ID	Username / Name	Role	Email	Status	API Access Granted
270271338	blogbluestone (Vikas)	Administrator / Author	[PLACEHOLDER: Email]	Active	Yes (REST API Key)
[PLACEHOLDER]	[PLACEHOLDER: Name]	Editor	[PLACEHOLDER: Email]	[PLACEHOLDER]	[PLACEHOLDER]
[PLACEHOLDER]	[PLACEHOLDER: Name]	SEO Manager	[PLACEHOLDER: Email]	[PLACEHOLDER]	[PLACEHOLDER]
[PLACEHOLDER]	[PLACEHOLDER: Name]	Technical Admin	[PLACEHOLDER: Email]	[PLACEHOLDER]	[PLACEHOLDER]

3.3 Automated Publishing Script Workflow (publish_*.py)

All articles are deployed programmatically using Python REST API wrappers:

Sample API Request Payload Structure

```
payload = {
  "title": "Happy Gudi Padwa Wishes 2027",
  "slug": "gudi-padwa-wishes-2027",
  "status": "publish",
  "author": 270271338,
  "content": "<!-- Gutenberg HTML Content -->",
  "categories": [23, 45], # Festive Wishes Category IDs
  "meta": {
    "_yoast_wpseo_title": "Happy Gudi Padwa Wishes 2027: 100+ Quotes & Messages",
    "_yoast_wpseo_metadesc": "Best Gudi Padwa wishes, quotes, and messages for 2027..."
  }
}
```

Section 4: System Access Details & Credential Registry

This credential matrix documents all third-party tool integrations, OAuth standard files, and team account placeholders.

Platform / Tool	Authentication Type	Identifier / Username	Credentials Location / Token File	Status	Notes / Scope
Google Search Console	OAuth 2.0 Client ID	Domain Property	scripts/client_secret.json scripts/gsc_token.json	Active	Scope: webmasters.readonly Domain: sc-domain:bluestone.com
Google Indexing API	Service Account JSON	Service Account Mail	scripts/indexing_token.json	Active	Scope: indexing Instant indexing submission
WordPress REST API	Application Password	blogbluestone	.env (WP_USER, WP_APP_PASSWORD)	Active	Author ID 270271338
SEMrush API / MCP	API Key / OAuth	[PLACEHOLDER]	Environment Variable / MCP Server	Active	AI Visibility & AIO Rank Tracking
Higgsfield AI MCP	Cursor MCP Integration	[PLACEHOLDER]	Cursor MCP Configuration	Active	Type 3 Image Gen (nano_banana_pro)
Magnific AI	API Key	[PLACEHOLDER]	scripts/magnific_generate_images.py	Active	Upscaling & Photorealistic Gen
OpenAI / Claude API	API Secret Keys	[PLACEHOLDER]	.env (OPENAI_API_KEY, etc.)	Active	Content Drafting & Summaries

Security & Access Control Policy

- 1. **Zero Secret Hardcoding:** API passwords and OAuth secrets must reside in .env or encrypted JSON token files (gsc_token.json).
- 2. **IP Whitelisting:** WP REST API calls restricted to authorized staging servers and build pipelines.
- 3. **Access Requests:** To add new team members to WordPress, GSC, or SEMrush, update the placeholders in Section 3.2 & Section 4.

Section 5: GEO & AI Overview (AEO/SGE) Performance Report

5.1 Generative Engine Optimization (GEO) Strategy

GEO aims to ensure BlueStone content is directly cited in **Google AI Overviews**, **ChatGPT**, **Perplexity**, and **Gemini** answers.

Core GEO Optimization Pillars:

- 1. **Snippet-Ready Answer Blocks:** H2 sections contain a 40–60 word direct summary answer immediately following the heading.
- 2. **Structured Takeaways:** Tables and bulleted lists used for quick AI parsing (wishes by category, gifting ideas by budget/type).
- 3. **FAQ Schema Validation:** Every article includes 3–5 JSON-LD schema-backed FAQs addressing high-intent question queries.
- 4. **Entity Linkage:** Direct mentions of jewellery terms linked to canonical category pages.

5.2 6-Month Semrush AI Visibility Trends (March – August 2026)

Data sourced via Semrush MCP API integrations (resource_rank_history & domain_rank endpoints):

- **Semrush AI Visibility Score:** 40 / 100 (Medium Visibility Tier — Active LLM Mentions)
- **6-Month AI Overview Growth:** +107.2% (from 918 positions in March 2026 to **1,902** in August 2026)
- **Total Semrush AI Citations:** **8.4K Citations (+17.6%)** across **4.8K Cited Pages (+15.7%)**
- **Domain AI Overview Keywords:** **15,455 keywords** triggering Google AI Overviews

Month-over-Month AI Overview Position Growth:

March 2026: [918] █
April 2026: [867] █
May 2026: [1,102] █

June 2026: [1,512]
 July 2026: [1,698] 
 August 2026: [1,902]  (+107.2% vs March)

5.3 LLM Platform Share of Voice & Geographic Distribution

LLM Platform Mentions Share:

ChatGPT (OpenAI)	: [68.1%]		(4,800 mentions)
Search Engine AI	: [29.9%]		(2,100 mentions)
Google AI Overview	: [19.7%]		(1,400 mentions)
Google Gemini	: [4.1%]		(284 mentions)

Geographic Share of Voice:

India	:	[75.4%]	
United States	:	[12.8%]	
Vietnam	:	[5.1%]	
Other Regions	:	[6.7%]	

5.4 Post-July 16 Strategy Funnel Impact (316 Post-Pivot Articles)

Following the July 16 strategy pivot, **316 festive & evergreen articles** were deployed using the new pipeline:

Strategy Funnel Stage	Article Count	% of Total Published	Benchmark / Performance Note
Total Published (Post-Jul 16)	316	100.0%	New Festive & Gifting Pillars
Indexed in Google Search	170	53.8%	Indexing API active (12–22/day velocity)
Receiving Search Impressions	134	42.4%	Fast traction across festive keywords
AIO & Snippet Eligible (Top 15)	101	32.0%	59.4% of indexed articles eligible for AEO
Page 1 (Top 10 Rank)	82	25.9%	Ranking on Page 1 within <4 weeks
Direct Search Clicks	97	30.7%	Generating active traffic to BlueStone blog

5.5 Action Plan to Expand AI Overview Market Share

1. **Entity & Schema Enrichment:** Deploy BlogPosting and FAQPage JSON-LD schema across remaining pending blogs to accelerate LLM entity parsing.
2. **Direct Answer Formatting:** Re-format top-performing H2 sections into 40–60 word direct answers.
3. **Product Rotation Integration:** Expand Type 3 photorealistic carousel product rotation on festive blogs (Ranks 1–54) to convert AI citations into jewellery purchases.
4. **Semrush Prompt Tracking:** Monitor high-intent commercial prompts in Semrush ("*best gold gifts for mom*", "*rakhi gift ideas 2026*") to capture high-converting AI queries.

 Document Revision & Maintenance Log

Version	Date	Author / Role	Changes / Updates
v1.0	2026-09-01	Vikas (BlueStone Editorial)	Initial consolidated AI-SEO documentation, cost estimates, access registry & GEO report
